| A Unit | Capitalisation |
| N Unit | Capitalisation |

Net realised capital gains:

| | |
|--------|----------------|
| I Unit | Capitalisation |
| A Unit | Capitalisation |
| N Unit | Capitalisation |

Management objective: The management objective is to seek, over an investment horizon of at least 5 years, a performance excluding fees by being exposed to equity markets of European Economic Area countries by benchmarking the MSCI Pan-Euro index (calculated at the closing price, net dividends reinvested).

Benchmark indicator: The index is an equity index designed by Morgan Stanley Capital International Inc., denominated in Euros and calculated at the closing price (net dividends reinvested). The index reflects the main stock market trends in the European Union. Further information on how to calculate this index is available to the investor on the website: www.msci.com/euro. Since the management is not index-based, the Mutual Fund's performance may differ substantially from the benchmark indicator.

Investment strategy:

Description of strategies used:

The management is proactive and discretionary.

To set out the investment strategy, the management team relies on the conclusions reached by committees set up by the Management Company.

The management philosophy is based on a long term vision, built on the fundamentals that give meaning to the economy and bring direction to investments. This expertise based on optimising internal added value is aimed at proposing and implementing an assets allocation system that is expressed through Economic and Financial Outlooks (EFOs). Three times a year, the EFO committee presents the macroeconomic scenarios by region or by country (unemployment rate, inflation, GDP growth, interest rates) selected by the Management Company.

The management team identifies viable themes and sectors based on the findings of the EFO, as well as a strategic analysis of stock markets. These themes are then operationalised in the selection of securities.

The allocation of the UCITS is then reviewed and adjusted, especially during investment committee meetings. Amongst the eligible securities, the manager equally analyses companies using criteria based on its market, strategy, product positioning, growth potential, balance sheet quality and valuation. These SWOT analyses of companies generate material for it to form its opinions (purchases or sales) and share them with the team, thereby enabling them to make investment decisions collectively.

The UCITS is managed based on a selection of securities that are likely to produce an event that will bring about an appreciation in value which outstrips the market.

The UCITS is managed proactively following a process aimed at creating added value particularly in the selection of securities but with no specific objectives at sector level.

In the shorter term, the manager makes tactical decisions in order to take advantage of temporary rises or falls in securities, which he/she considers as excessive.

The strategy is to look for companies in exceptional situations: companies that may experience a share capital transaction, companies undergoing a turnaround, companies owned by a group under restructuring.

Where required by market conditions and pending an equity investment opportunity, the manager may opt to invest in negotiable debt securities and other money market instruments up to a maximum of 20% of the UCITS' net assets.

The UCITS will have a permanent exposure of at least 80% of its net assets to equity markets. Its maximum exposure will be 110% of its net assets. The portfolio of the UCITS will be permanently invested to the tune of 75% at the minimum of its net assets in shares and/or similar securities eligible for the ESP issued by companies with head office in the European Economic Area. The UCITS may be exposed to a maximum of 25% of its net assets to equities and/or similar securities of companies outside the European Economic Area. The UCITS is exposed to currency risk for currencies other than those of the European Economic Area countries up to a maximum of 25% of net assets.

The UCITS is exposed to equity risk within a range of 80% to 110% of net assets.

The interest rate risk exposure is limited to 20% of net assets.

In addition to financial analysis, the management team's investment decisions are based on environmental, social and governance ("ESG") criteria assessed on the basis of non-financial data available from the Management Company's financial and non-financial analysis team or from an external data provider.

In order to ensure proportionate communication in line with the ESG criteria, the following objectives are pursued:

The non-financial analysis covers at least:

- 90% of large capitalisation equities with head office in "developed" countries, investment-grade debt securities and money market instruments, as well as sovereign debt issued by developed countries; and
- 75% of shares issued by large capitalisation companies with registered office in emerging countries, shares issued by small and medium capitalisation companies, debt securities and money market instruments with a high-yield credit rating and sovereign debt issued by emerging countries.

The analysis ratio is assessed based on eligible assets and the maximum investment levels described in the section "Description of Asset Classes".

This analysis is based on a rating upgrade approach, whereby the rating of the collective investment must be higher than the rating of the UCI's investment universe.

The contribution of environmental, social and governance (ESG) criteria is taken into account in making investment decisions, in addition to the financial analytics, although it is not a systematic determining factor in such decision-making.

The UCI promotes environmental, social and governance (ESG) characteristics within the meaning of Article 8 of Regulation (EU) 2019/2088 on sustainability reporting in the financial services sector (the "Disclosure Regulation"). The Management Company's investment policy takes into account the most significant impacts of sustainability risk and aims to limit it through a system based mainly on the implementation of normative and sectoral exclusion filters applicable to all UCIs, for any direct investment in shares or bonds (cf. exclusion policy available on the website www.covea-finance.fr), and the implementation of non-financial selection criteria determined on the basis of assessments by the financial and non-financial analysis team and/or on the basis of data available from an independent external service provider in addition to the financial selection criteria. Sustainability risk is thus assessed using a set of criteria built on the environmental, social and governance pillars to identify the main negative impacts of investments on ESG factors. This information is available in the Sustainability Risk Statement available at www.covea-finance.fr.

However, assessment of the likely impact of sustainability risks on UCI performance is still contingent on structural limitations, such as data availability and quality."

EU Regulation 2020/852 on the establishment of a framework to promote sustainable investments (the so-called "Taxonomy Regulation") seeks to identify business activities considered as environmentally sustainable." The Taxonomy Regulation identifies these activities based on their contribution to achieving six broad environmental objectives:

- Climate change mitigation,
- Climate change adaptation,
- Sustainable use and protection of water and marine resources,
- Transition to the circular economy (waste, prevention and recycling),
- Pollution prevention and control,
- Protection of healthy ecosystems.

Currently, Technical Screening Criteria have been devised for certain business activities that can substantially contribute to achieving two of these objectives: climate change mitigation and climate change adaptation. These criteria are currently awaiting publication in the Official Journal of the European Union. Thus, the data presented below only captures alignment with these two objectives, based on currently unpublished criteria, as submitted to EU co-legislators. This information may be updated in the event of changes to the criteria, development of new screening criteria for these two objectives, as well as during implementation of criteria for the other four environmental objectives.

To be considered sustainable, a business activity must demonstrate that it makes a substantial contribution to the achievement of one of the 6 objectives, while not harming any of the other five (the so-called DNSH (Do No Significant Harm) principle). For an activity to be considered aligned with the Taxonomy Regulation, it must also uphold the human and social rights enshrined in international law.

The Fund does not currently make any commitments to align its activity with the Taxonomy Regulations. The percentage of alignment with climate change mitigation and climate change adaptation objectives is currently low. The proportion of investments aligned with the Taxonomy Regulation is based on incremental and consistent access to data reported by issuers. The Fund will be able to set an alignment target in line with the regulations once the Technical Standards come into force on 1 January 2023, as and when data is made available by issuers.

The “do no significant harm” principle applies solely to the investments underlying the financial product that reflects EU criteria for environmentally sustainable business activities.

The investments underlying the remaining portion of this financial product do not reflect EU criteria for environmentally sustainable business activities.

Description of asset categories

- Shares and similar securities:

At least 75% of the UCITS net assets are invested in equities and/or similar securities eligible for the French PEA equity savings plan issued by companies having their registered office in the European Economic Area with no predetermined distribution formula. The selection will be made on securities giving or that can give direct or indirect access to the capital or voting rights of companies, with no prior consideration of the size or sector of the company.

The UCITS may also invest up to a maximum of 25% of its net assets in equities and/or similar securities of companies outside European Economic Area countries.

The UCITS is exposed to the foreign exchange risk for currencies other than those of the European Economic Area for a maximum amount of 25% of the net assets.

- Debt securities and money market instruments:

The UCITS may invest up to 20% of its net assets in money market instruments and debt securities issued by public or private issuers, without any predetermined distribution formula, with a minimum “Investment Grade” rating (BBB- by Standard & Poor’s or a rating deemed equivalent by the management company) for up to 80% and up to 20% in securities which may have a lower rating, in the European Economic Area or outside the European Economic Area, up to a maximum of 10% for the latter geographical area, particularly: Fixed-rate or variable-rate bonds, EMTN, convertible bonds (10% maximum), bonds with purchase warrants, indexed bonds, negotiable debt securities, money market instruments.

The Management Company does not make use solely or systematically of the ratings issued by rating agencies, and also carries out its own in-house analysis. In the event of rating deterioration, the assessment of the rating constraints will take into account the interest of the holders, the market conditions, and the analysis of the Management Company itself on the rating of these rate products.

The fund’s sensitivity range lies between 0 and 8.

- Shares or units of UCIs and Investment Funds:

The UCITS may invest up to 10% of its net assets in units or shares of undertakings for collective investments including exchange-traded funds (ETF) comprising:

- Units or shares of French or European UCITS;
- Units or shares of French AIFs that comply with the four requirements of Article R214-13 of the Monetary and Financial Code.

The aforementioned UCIs may be managed by the Management Company.

- Derivative instruments:

The UCITS reserves the right to intervene on derivatives up to a maximum limit of 100% of its net assets:

Type of investment markets:

- Regulated
- Organised
- Over-the-counter

Risks on which the manager wishes to intervene:

- Equity
- Foreign exchange

Type of interventions:

- Hedging
- Exposure

Type of simple derivatives used:

- Futures (equity, index, currency)
- Options (equity, index, currency)
- Swaps (equity, index, currency)
- Forward foreign exchange

Strategy for using the different instruments:

Forward and/or conditional financial instruments are part of the investment process due to their liquidity and their cost effectiveness. The underlying items concern asset categories used directly.

Equity and index futures (futures contracts) are used for purchasing or selling as inexpensive and liquid substitutes for direct investments to adjust the portfolio's global exposure to the equity risk.

Currency futures and currency market forward contracts are used during purchases and sales as cheap and liquid substitutes for foreign currencies. They are used to adjust foreign currency exposure (or for hedging) in order to achieve the management objective.

Equity/index options and swaps related to equity markets are used for equity risk hedging and exposure.

Currency swaps and options are used to hedge foreign exchange risk.

Forward foreign exchange transactions are used to hedge exposure to currency.

Transactions on derivatives are carried out up to the 100% limit of net assets of the UCITS.

- Securities with embedded derivatives:

The UCITS may have recourse to embedded derivatives within a maximum limit of 10% of its net assets.

Risks on which the manager wishes to intervene:

- Equity
- Foreign exchange

Type of intervention:

- Hedging
- Exposure

Type of securities used:

- Convertible bonds (maximum limit of 10% of net assets)
- Financial securities warrants
- Other warrants
- Other capital or debt securities with a financial contract
- The certificates with raw materials futures indices as underlyers

- Strategy for using securities with embedded derivatives:

On regulated, organised or over-the-counter markets, the UCITS may use securities with embedded derivatives on an incidental basis to a maximum limit of 10% of net assets with view to optimising performance.

The derivatives will be used for hedging and/or exposure to equity or foreign exchange risks.

The manager can also choose to invest up to 10% of the net assets in certificates which have for purpose to allow the manager to immediately expose the Fund to the perspectives of a particular market or sector including that of raw materials.

The certificates under consideration have for underlying items the raw materials futures indexes.

- Cash loans:

The UCITS may take out cash loans of up to 10% of its net assets.

- Deposits:

Deposits with a term of less than 12 months, made with a credit institution whose registered office is in a Member State of the European Union or a Member State of the European Economic Area may be used to obtain a return on cash for a maximum amount of 10% of net assets.

- Cash:

To meet the management objective, the UCI may hold cash within a maximum limit of 10% of net assets. However, when exceptional market conditions so warrant, the UCI may raise this limit to 20% insofar as this cash level, when added to the exposure to the elements mentioned in III of Article R.214-21 and Article R.214-32-29 of the French Monetary and Financial Code, does not exceed 30% of net assets.

- Temporary purchases and sales of securities:

The UCITS may implement techniques for the temporary transfer or acquisition of financial instruments.

These will include securities lending, and/or repurchase transactions on stocks and/or similar securities of up to 25% of its net assets with the authority to terminate any contracted transaction at any time, and/or securities borrowing and reverse repurchase transactions of up to 100% of its net assets with the authority to recall the total amount in cash for reverse repurchase transactions in return for cash and/or terminate the transaction at any time.

The tentative proportion of assets under management that will be used for such a transaction may account for 10% of net assets. Any subsequent temporary acquisition or transfer of securities will be carried out under market conditions and pursuant to the regulations. These transactions will be carried out with the aim of managing cash flow and/or optimising the income of the UCITS. The counterparties of these operations will be credit institutions having a minimum "Investment Grade" rating and whose registered offices are located in a member country of the OECD. They will be selected by a counterparty selection committee according to the criteria determined by the management company. Additional information on remuneration is provided in the fees and commissions section.

The assets received by the UCI from temporary purchases and sales of securities will be held by the fund depositary.

The assets received by the UCI in the context of effective management techniques are considered to be financial guarantees.

- Information on financial guarantees:

In over-the-counter derivative transactions and temporary acquisition/transfer of securities, the UCITS may receive financial assets as collateral and aimed at reducing its exposure to counterparty risk.

There is no correlation policy given that the UCI will only receive cash as financial guarantee (collateral).

In this respect, any financial guarantee received must fulfil the following criteria:

Financial guarantees in cash will be:

- deposited with eligible entities;
- invested in high quality government bonds;
- used in a reverse repurchase agreement;
- invested in money market undertakings for collective investment (UCIs).

The risks associated to cash reinvestments depend on the type of assets or operations and may include liquidity risks or counterparty risks.

Maximum usage level of the different instruments:

The overall exposure to directly held securities, shares and units of the UCI as well as financial futures may amount to 200% of net assets (i.e. up to 100% of net assets in directly held securities and shares of the UCI, and up to 100% of net assets in derivatives) within the limits of the predefined exposure categories. This commitment limit takes into account any instruments with embedded derivatives.

Risk profile: Your money will be invested primarily in financial instruments selected by the Management Company. These instruments will be subject to market fluctuations.

The investor is exposed to the following risks:

Equity risk:

This risk arises from fluctuations in equities markets that can have a negative impact on variations in the Fund's net asset value in case of a fall in equity markets.

Risk related to discretionary management:

The management style applied to the Fund is based on selection of securities. There is thus a risk that the selected securities may not be the best performing ones. The Fund's performance may not be consistent with the management objectives. The Fund's net asset value may also perform negatively.

Risk of capital loss:

The Fund does not benefit from any guarantee or protection. Therefore the capital initially invested may not be recovered in full.

Interest-rate risk:

The interest-rate risk is the risk associated with a rise in interest rates, which causes a drop in debt security prices and/or money market instruments that may lead to a decline in the Fund's net asset value.

Credit risk:

This risk arises from the failure or deterioration in the credit quality of a rate instruments issuer. The value of these rate instruments may fall, thereby leading to a drop in the Fund's net asset value.

Risk of overexposure of the Fund:

The Fund may use derivatives and opt for overexposure. Should the market decline, the Fund's net asset value can therefore drop more substantially than in the markets to which the Fund is exposed.

Counter-party risk:

This is the risk of losses incurred due to the failure of a market participant or its inability to satisfy its contractual obligations and to honour its commitments. This failure may lead to a drop in the Fund's net asset value. This risk stems from over-the-counter transactions concluded with counterparties.

Currency risk:

This is the risk of a drop in the value of the investment currencies in relation to the Fund's reference currency, namely the euro. This risk will be represented by the share of the portfolio not invested in euros. Currency fluctuations compared with the euro may have a negative impact on the Fund's net asset value (where the exposure to these currencies is not hedged).

Raw materials risk:

The fund may be exposed by its underliers to the raw materials market. Commodities may fluctuate in a manner that is significantly different from traditional transferable securities markets. An unfavourable development on the raw materials market may lower the fund's net asset value through an indirect exposure to raw materials.

Risk from investing in derivatives and/or securities with embedded derivatives:

The Fund may use derivatives and/or securities with embedded derivatives. When used as part of an exposure strategy on a bearish market or as a hedging strategy on a bullish market, this may have a negative impact on the Fund's net asset value.

Sustainability risk:

Any event or situation in the environmental, social or governance spheres, the occurrence of which may actually or potentially have a material negative impact on the value of the investment. The occurrence of such an event or situation may also lead to the securities of certain issuers being excluded from the investment universe. More specifically, the negative effects of sustainability risks may affect issuers through a range of mechanisms (lower revenues; higher costs; damage or depreciation of asset value...). Due to the nature of sustainability risks and specific issues, such as climate change, the probability of sustainability risks impacting returns on financial products is likely to grow over the longer term.

Eligible subscribers and typical investor profile:

I Unit: Reserved for legal entities and UCIs

N Unit: Retrocession-free units reserved for i) investors in retail banking networks, private banks, or ii) investors operating through a financial broker that independently provides investment consulting, pursuant to European Regulation MIF 2 or through an individual discretionary portfolio management service, or iii) investors operating via retailers or brokers who are bound by national laws that prohibit any retrocessions to retailers.

A Unit: All subscribers.

The investment option is in line with the needs of persons looking for a dynamic capital valuation and who are willing to accept a high equity risk.

The minimum recommended investment duration is 5 years.

This UCITS may not be offered for sale, sold, marketed or transferred to the United States (including its territories and possessions) nor directly or indirectly benefit a US person or entity, US citizens or a "US Person" as defined by the FATCA act of 2010.

The reasonable amount to be invested in this UCITS will depend on the unitholder's personal situation, which must take into account their personal assets, current needs, the recommended investment period as well as their risk aversion. Investors are also advised to diversify their investments sufficiently so as not to be exposed solely to the risks of this UCITS.

Tax regime: The UCITS is not subject to French corporation tax. The fiscal transparency principle applies to the bearer.

The bearer's fiscal status depends on whether they are a resident or non-resident corporate entity or private individual.

Income distributed is liable for personal income taxes for residents, except in the specific cases of withholding tax or corporate tax for corporate bodies.

The latent capital gains or losses generated by corporate bodies liable for corporate tax will be recognised in the taxable income following a taxation procedure applicable to their category.

Dividends received by a non-resident unitholder are liable for withholding tax, subject to the existence of a tax agreement with the unitholder's country.

Generally, the Fund's unitholders are encouraged to contact their tax advisor.

The UCITS can be used as an underlyer for life insurance contracts. The UCITS is eligible for the SSP (Stock Savings Plan).

For further information, the full prospectus is available on request from the management company.

- The net asset value is available from Covea Finance on the website: www.covea-finance.com.
- The prospectus, annual reports and the latest periodical documents are sent free of charge within eight business days upon written request from the holder sent to: Covea Finance, 8-12 rue Boissy d'Anglas, 75008 Paris, e-mail: communication@covea-finance.fr.
- Date the UCITS was created : 9 November 1988.

activity report

Economic Environment

In 2022, the gradual dissipation of health risk in most economies (with the notable exception of China) gave way to other perils. The escalation of geopolitical tensions led to Russia's invasion of Ukraine. This event highlighted the polarization of the world, accentuated geopolitical uncertainties and deepened the economic imbalances caused by the health crisis. Rising energy and commodity prices and supply chain tensions led to a very strong increase in inflation. Domestic inflationary pressures gradually took over from external pressures, leading to a broad tightening of monetary policies by most major central banks throughout the year. However monetary restrictions and rising prices impacted demand in the second half of 2022. The economic slowdown, coupled with reduced access to liquidity, posed an increasingly tangible financial risk on liabilities accumulated before and during the health crisis by public and private players. On foreign exchange markets, the euro declined against the dollar by 5.8%, closing at \$1.066 per euro. The price of a barrel of Brent crude oil rose by 10.45%, closing out the year at \$85.91.

In the United States, the Federal reserve (Fed) embarked on a new round of monetary tightening in the face of inflationary pressures. Price increases intensified as supply-demand imbalances persisted with inflation peaking at 9.1% in June. Consumption held up however largely due to the savings surplus accumulated after the exceptional budget stimulus provided in 2020. Nevertheless, the new inflationary environment weighed down on the purchasing power of households and ate into this savings surplus. On the labour market side, demand for labour remained strong throughout the year, leading to wage growth, which is not showing any sign of slowing down yet. In this context, the Fed increased rates at a rapid pace with a total increase of 425 basis points over the year. This tightening movement should continue. Individual forecasts by members of the Federal Open Market Committee (FOMC) in the December meeting indicate that the key rate could be raised to [5.00; 5.25%] by the end of 2023, an increase of 50 bps compared to the trajectory presented in September in the previous set of forecasts. This tightening of financing conditions has severely penalised the US real estate sector. On the budgetary front, the senators adopted the Biden administration's plan entitled the "Inflation Reduction Act" which aims to reduce the impact of price increases and allow for a reduction in the public deficit of about \$300 billion in 10 years. Finally, the midterm elections in November gave the Republicans a majority in the House of Representatives while Democrats retained a majority in the Senate. This new configuration suggests a legislative status quo for the end of President Biden's term, with each side neutralizing the other's plans.

In the United Kingdom, political turmoil was compounded by the economic downturn. Coming to power in the summer of 2022, following the resignation of Boris Johnson, Liz Truss held the shortest term in British history as Prime Minister. The announcement of her fiscal policy led to tensions on sovereign rates and the pound sterling. The Bank of England intervened to stop this financial panic by buying sovereign bonds over a very short period of time. These events led to the resignation of L. Truss, replaced by Rishi Sunak. At the same time, economic difficulties have accumulated, particularly for households, which have seen their purchasing power decline sharply due to inflation. In this context, the Bank of England raised its key interest rate several times and stressed at its last meeting that the labour market remained tight and that inflationary pressures were being increasingly driven by domestic factors thus justifying further monetary policy tightening.

In the euro area, the conflict in Ukraine starkly revealed the energy dependence of European countries. The geopolitical context as well as Europe's desire to reduce this dependence on Russian energy imports led to a surge in energy prices. Inflationary pressures gradually spread to the economy as a whole and the euro area experienced record inflation of 10.6% in October. The energy shock, combined with great uncertainty around the conflict, led to a moderation in economic activity and a deterioration in survey indicators, particularly in Germany. In this context, the European Central Bank followed in the steps of its counterparts and made several increases in its key interest rates starting in the summer of 2022. The tightening cycle is expected to continue at least into the first half of 2023. On the fiscal side, many governments announced measures to support households and businesses in the face of rising energy prices. In addition, EU member countries agreed on a number of measures to reduce their dependence on Russian energy and limit the rise in energy costs, including joint gas purchases and the introduction of a ceiling price on gas of €180/MWh. On the political side, the year was marked by the coming to power in Italy of the Eurosceptic "Brothers of Italy" party, led by Georgia Meloni.

In China, economic activity suffered from the government's "zero-covid" health policy. Restrictions related to the different epidemic waves in 2022 hampered both internal demand and production capacity. However, the authorities decided to abandon this health policy at the end of the year, but the resulting sharp rise in contaminations should not enable economic normalization in the short term. At the same time, China's real estate sector continued to deteriorate, despite government stimulus.

In Japan, monetary policy remained the same running counter to that of the other major developed economies. This monetary policy differential resulted in a sharp depreciation of the yen, which led the authorities to intervene on foreign exchange markets. However, the Bank of Japan surprised markets at its last meeting of the year by announcing a relaxation of its policy of controlling the rate curve by increasing the rate fluctuation band on 10-year sovereign bonds from ± 0.25 pt around 0% to ± 0.5 pt around 0%. As regards economic activity Japan continued to struggle to return to its pre-crisis levels but did show signs of recovery in the last few months of the year.

Presentation of financial management carried out on shares

Europe

Financial markets

In terms of the performance of the various types of assets internationally, the 2022 financial year contrasted with the very good previous year: even though global commodities indices managed to maintain their positive trend, most other risky assets underwent significant corrections.

Indeed, stocks and bonds fell sharply, in relatively similar proportions in an unusually correlated movement. At the same time, investors took refuge in cash, the yield on which is continuing to increase in particular when held in US dollars. The trend on this currency is supporting the resistance of gold prices stated in euros. Gold is taking its revenge on the many cryptocurrencies that are collapsing, especially in the wake of the bankruptcy of the specialized broker FTX.

Reflecting strong turmoil and volatility spikes, global equity indices graphically followed a downward spiral: they went through lows that spooked investors fearing they might be entering long-term bear markets - as in June and September - and when they did rebound, they peaked - as in August - at levels never very far from those seen at the beginning of the year. On the other hand, the downward trend in bond markets was more linear.

Geographically, the only significant equity indices that managed to turn in positive performances were in Latin America (Argentina, Chile and Brazil), Asia (Thailand, Indonesia, India and Singapore) or Europe (United Kingdom, Portugal, Norway and Greece). Turkey is also experiencing a powerful backlash. Elsewhere, Japanese and European stock indices limited their declines whereas Chinese and American equities fell sharply, especially the Nasdaq (-28.9%), a mainly tech stock index.

In fact, the geographical performance hierarchy of equity indices in 2022 was significantly influenced by their sectoral structure, the presence of energy and defence stocks, the weight of highly leveraged stocks and the degree of sensitivity of index components to long rate variations based on their duration; this last factor led traders to turn over sectors and styles, the across-the-board reduction in market cap levels observed and the decline in numerous growth stocks.

In fact, this trend in negotiable securities derives from the reversal of the rate cycle, initiated by the main central banks - apart from that of Japan - with a view to cooling down overheating economies after the covid crisis, despite fears that this policy could lead to economic recession. It also came from the degraded geopolitical context (invasion of Ukraine by Russia on February 24, heightened Sino-American tensions, accompanied by threats of nuclear war), and the health crisis in China.

Indeed, central banks were caught blindsided and are now going all out and giving their priority to try to combat the inflationary surge (from mid-March, the FED had accumulated a total increase in its key interest rates of 4.25%). This level of inflation had not been seen in forty years and was clearly not anticipated by the central banks; practically, these monetary authorities are impacting the short and long parts of their rate curves, raising their key rates and reducing their balance sheets.

This inflationary surge initially came from cyclical imbalances, already experienced in 2021 - between supply (logistical disorganizations and post-covid labour shortages, shortages of raw materials and electronic components) and demand (renewed post-covid consumption, massive budget deficits, money supply creation) depending on the area - and to which were added structural imbalances between supply (demographics impacting the labour market, mining investments deemed insufficient), and demand (massive relocation plans or energy transitions). Inflation then found its second breath, as a result of Russia going to war with Ukraine, because it resulted, among other effects, in a deep energy crisis in Europe worthy of the 1970's (soaring gas prices). This drove hydrocarbon prices up all over the world in the first half of the year and led to priority being now given to military budgets; to this was added China and an almost continuous economic paralysis, given the failure of the authoritarian zero-covid-19 policy.

Throughout the year, stock volatility was fuelled in particular by uncertainty among most investors regarding how the main central banks would apply their rate increases (rate of progression and ultimate target ceilings for their key rates) and the tangible effects of their policies on the economy. The way macro-statistical data is interpreted by market operators is all the more complex since there are the usual lags between the effects of rate increases on the economy and differentiated impacts depending on the origin of the inflation. At the same time, the impact of central bank rate hikes was almost immediate on markets, such as foreign exchange markets, as evidenced by the strengthening of the US dollar since the FED was ahead of the other central banks in raising rates. For example the ECB's first announced rise only came four months after the Fed, in July, and the impact of this was to rapidly slow US imports.

In this context, most investors welcomed signals of even moderate economic slowdown, while on the contrary, any change deemed a little excessive made them fear the dreaded stagflation scenario.

However, in the face of headwinds, markets were able to count on solid micro-economic support throughout the year: numerous companies managed to pass on their rising costs to their customers.

Severe decline in global stock markets in the first half of the year:

During this period, the high quality of corporate earnings and guidance was not sufficient to counteract the strong headwinds that weighed down on stock markets. One example was the S&P 500 which posted its worse half-year performance in 52 years. Investor sentiment deteriorated as they anticipated and observed the new monetary measures that the major central banks were adopting to counter inflationary pressures.

The Fed's lead in its rate-raising cycle relative to other central banks facilitated the US dollar's increase against the other major currencies: it approached parity with the euro while the Japanese yen continued to fall reaching its lowest point since 1998.

In early January, the FED suggested it intended to counter the unusual inflationary pressures that were emerging from the statistics more quickly than anticipated by means of the following measures: a stop to asset purchases in March, repeated increases in its key interest rates and a reduction in its balance sheet in July were announced or anticipated by investors. This perspective started to fuel the rise in rate curves.

Rising prices and rates found a new momentum with the tensions between Russia and Ukraine which then turned into open warfare on February 24. This confrontation was reflected in Europe in further supply disruptions in the food, industrial goods and energy sectors: oil, gas and electricity prices soared, especially due to Germany's dependence on Russian resources.

As a result, bond markets consolidated sharply in March in the face of strong inflationary pressures not seen in forty years. Western equity markets showed resilience, thanks to the favourable perception of sound macroeconomic statistics and the FED's first monetary rate hike since 2008. However with the introduction of a Western embargo on Russian oil, which propelled Brent up to the 140 US dollar mark, equity markets in emerging countries, the most dependent on imports of raw materials fell and China again imposed new lockdowns. Nevertheless, a temporary relaxation in oil prices came with the announcement that the US was placing part of its strategic stocks on the market.

Markets remained poorly oriented up to the end of June. Even with corporate earnings holding up on the whole, the nervousness was palpable with stocks being heavily sanctioned at the slightest sign of a slowdown in their momentum.

The Russia-Ukraine conflict contributed to the persistent disorganizations of supply chains and the rise in commodities prices. Moreover, forecasts from the IMF and macro-statistics suggested a more severe than expected economic slowdown. In this context the fear of stagflation took hold: rate curves rose and sloped upwards rapidly, while investors feared an over-reaction from the Fed.

The latter raised its rates by 50 basis points for the first time since 2000 in early May, accentuating the strong upward trend in the dollar observed since the beginning of the year. At the same time, Chinese statistics reflected the impact of the strict lockdowns. International equity markets limited their declines while investor sentiment was dominated by fears of recession.

The fall in markets became brutal as international equities hit their yearly lows. Indeed to counter inflation, the ECB communicated about a 0.25% increase in its rates expected the following month and another possible 0.5% at the beginning of the year. In its wake, the FED raised its rates this time by 75 basis points. Market operators feared a widespread recession. At the same time, June gas prices on the European benchmark rose by 50%.

In the second half of the year, interest rates continued to rise but did not completely stop rising equity markets:

At the beginning of the summer, the ECB, as announced, rose its key rate for the first time since 2011. This weighed on long rates, facilitating the euro's move to parity with the USD for the first time in 20 years. A rebound in international stocks occurred up to mid-August thanks to the momentum generated by good corporate earnings and guidance.

But the downturn in stock markets came from new statistics indicating an economic slowdown and the sharp decline in Chinese equities, penalised by the on-going internal zero covid policy. The ECB and FED increased their key interest rates by 75 basis points: the decline accelerated until the end of September, as the majority of investors feared that the global economy would enter a sharp recession, reflected, for example, in the strongest reversal of the US rate curve in 40 years. In Europe, the energy crisis worsened with the sabotage of the Nord Stream 1 and 2 pipelines, depriving Germany of Russian gas, and in Asia, the decision of the Chinese authorities to lock down Shenzhen against Covid. This did not prevent the ECB and FED from raising their key interest rates by 0.75% on the 8th and 21st of the month.

Stock rebound up to the end of November and bond consolidation.

Western equity markets managed to halt their decline and started to recover with the help of two driving forces: the expectation that the rate hikes policy adopted by the main central banks would change in the light of statistics showing an economic slowdown as well as the quality of quarterly earnings and guidance. On this occasion, the Dow Jones rose by 14.3%, its strongest monthly increase in 46 years.

Against a backdrop of lower volatility, global stock markets rose significantly in November. Economic activity and inflation statistics, speeches and official decisions met the two main expectations of the majority of investors. The slowing economies, the sharp reversal of the American real estate market and inflation on both sides of the Atlantic led to an expected moderation in the rate increase movements of the Fed (up to 4.5%) and the ECB (its deposit rate reached 2%); as well as a easing of the zero covid policy in China. Also of note was the gradual fall in oil prices, despite a stronger US dollar, due in particular to a milder start to the Winter in Europe.

The main stock markets continued to decline around the world in December, against a backdrop of rising long-term rates. In view of conflicting statistics, the FED and the ECB limited the increase in their rates to 50 basis points in the middle of the month. Nevertheless, the two central banks communicated on sustaining their restrictive policies to counter inflation. Most investors then fell prey to further uncertainty concerning the intensity of the coming recession. At the same time, the clear loosening of the zero covid policy in China raised fears of a rise in inflation, especially through commodities prices. Also of note was the strengthening of the euro against the dollar.

Management Policy

While the coronavirus pandemic seemed to be normalising in Europe, the 2022 stock market year was hit by the conflict in Ukraine which led to an unprecedented energy crisis due to interruptions in gas supplies. These disruptions accentuated inflationary pressures already present since 2021, particularly as supply chain disruptions led to shortages. Of course, central banks embarked on a cycle of monetary tightening in an attempt to rein in rising prices. The European Central Bank (ECB) increased its key interest rate 4 times over the year to 2.5% compared to 0% at the start of the year.

This configuration was particularly favourable to energy stocks, driven by the surge in commodities prices and to bank stocks now benefiting from a more favourable interest rate environment. On the other hand, the rise in rates was unfavourable to long duration sectors such as the tech sector.

Covea Opportunité's management is active and discretionary, in line with our Economic and Financial Outlook and the fund's investment theme, which is made up of the following sub-themes:

- Capital transactions, we invest in companies that may be the subject of a takeover or merge bid by a competitor or private equity fund on the one hand; or a mandatory listing withdrawal offer on the other. We are also seeking to identify companies that may be subject to a change in the scope of their business in the context of a split up or disposal of a line of business, for example.
- Turn-arounds concern stocks for which we have detected a valuation anomaly and for which the management team believes a change in perception will take place as a result of the catalysts previously identified and discussed in committee meetings.
- Restructuring brings together companies implementing broad restructuring programs to improve their profitability under the leadership of the management team concerned with crystallising the value of its assets or after a change of management or under pressure from activist shareholders.

At the end of the year, the fund's three main sectors are consumer goods, materials and health care.

The weight of consumer goods fell from 17% in early January to 14.7% at the end of December. During the year, we reduced the target weight in Campari, JDE Peet's (coffee player with the brands L'Or, Douwe Egberts), L'Oréal and Nestlé after a solid stock market run.

We are introducing two new stocks into the portfolio: Danone and Unilever, two giants in the non-discretionary consumer goods industry. Both companies present attractive valuations and open the prospect of a scope change in their brand portfolio under the impetus of the new leadership for the former and activist Nelson Peltz for the latter.

The weight of the materials sector increased from 10.8% at the beginning of January to 13.6% at the end of December.

At the beginning of the year, we introduced the Dutch company DSM anticipating a change in stock market perception and a revaluation of valuation multiples. DSM is speeding up its transformation by divesting traditional chemicals activities to refocus on speciality segments, in particular ingredients. In the spring, DSM announced its intention to merge with Firmenich, a leader in ingredients for the nutrition, beauty and wellness markets. We also introduced the Swiss recyclable packaging company SIG Combibloc, benefiting from an attractive valuation level. Another new company to join the portfolio was the diversified mining group Anglo American, well positioned in the batteries value chain in particular. As for disposals, we reduced the target weight in Linde (a leading player in the industrial gases segment) and Symrise (a leading player in ingredients for the food, well-being and animal health industries) as a result of their solid stock market run.

The weight of the health sector fell slightly, from 11.4% in early January to 9.7% at the end of December. We introduced the active ingredient manufacturer EuroAPI, resulting from the Sanofi split up. During the year, we reduced the target weight of Lonza and Novartis, two Swiss companies, in order to manage our exposure to companies outside the European Economic Area and the Swiss currency.

While industry was the sector most represented within Covea Opportunité at the start of the year (17.3%), it only represented 7.8% at the end of the year. We reduced exposure to this sector against a backdrop of fears concerning the state of demand in the context of an economic slowdown on the one hand and the impact of the general rise in costs on their profitability on the other. We sold the position in Alstom, due to lack of visibility over the company's cash generation trajectory. We also sold Siemens Energy in anticipation of a possible offer from it to Siemens Gamesa's minority interest holders, resulting in a significant integration and balance sheet risk. At the beginning of the summer, Siemens Energy made a cash offer to Siemens Gamesa minority interest holders at €18.05. COVEA Opportunité holds a 1.1% position in Siemens Gamesa. Finally, we sold Kion, a forklift manufacturer in anticipation of a deterioration in its outlook.

Note also the reduction in the weight of the tech sector, from 11.3% at the beginning of the year to 7.9% at the end of December. The rise in long-term rates and trade tensions between the United States and China limiting sales of American technology to Chinese companies penalised the sector. We sold our position in Worldline for lack of obvious catalysts following the announcement of the sale of the payment terminals business at a price better than initially expected. We also closed our position in Nexi, a payments player in Italy, and in Adevinta, owner of the small ads site Le Bon Coin. At the end of the year, we introduced Amadeus, the global leader in airline ticket booking platforms, in order to gain exposure to the forthcoming air traffic normalisation.

Finally, the weight of the financial sector increased from 4.8% at the beginning of the period to 8.7% at the end of the year. The sector benefited from an improved earnings, driven by the more favourable rate environment. We thus increased the target weight of BNP Paribas, ING and we introduced Allfunds, a fund management platform.

We actively managed the fund's investment rate to take advantage of equity market volatility in an opportunistic manner. At the end of the year, the exposure rate was about 91%.

Outlook

The stock market trend over the next few months will depend primarily on the extent to which the inflation-fuelling issues encountered in 2022 are resolved: the war in Ukraine leading to supply difficulties - in particular energy in Europe -, the covid epidemic in China - the resolution of which would boost the country's economy and trade, but would lead to an increase in the price of commodities - or the level of the global economic slowdown induced by the restrictive monetary policies of the main central banks; as regards this, the degree of asynchrony between the FED and the ECB will determine exchange rate trends. Secondly, on-going resilient corporate earnings and guidance - particularly in the most inflationary sectors - is the second decisive factor. Beyond that, markets will certainly pay attention to how sustainable economic agents' debt is, to the establishment of non-tariff barriers in the major regions, and, for equities, to the effects of investment plans around the world concerning the repatriation of manufacturing activities or the energy transition.

UCI performances

In 2022, COVEA ACTIONS EUROPE OPPORTUNITES posted a performance of -17.23% for the IC unit, -18.05% for the AC unit.

Meanwhile, the performance of its benchmark index, MSCI Pan-Euro (in Euros) with net dividends reinvested, stood at -7.13 %.

The performance achieved over the period does not affect the future results of the UCI.

The UCI's overall risk exposure is measured by the method of calculation of commitments.

Efficient portfolio management techniques

For the 2022 financial year, the UCITS:

- used over-the-counter financial derivatives (forward exchange) and listed derivatives (futures);
- did not resort to temporary purchases and/or sales of securities.

At the end of the financial year, the UCITS:

- is not exposed to equities via index futures;
- holds currency futures to hedge exposure to the Swiss franc for €1.5 million (i.e. 0.95% of the fund),
- holds forward foreign exchange contracts maturing in January 2023 to hedge against exposure to the Swiss franc for -€18.04 million (i.e. -11.36% of the fund)

Additional information (PEA, others...)

The average stock exposure to PEA-eligible stocks for 2022 stood at 77.47%.

REGULATORY INFORMATION**Information on selection policy for execution intermediaries and execution policy**

Pursuant to its professional obligations as a portfolio management company as set forth by the French Monetary and Financial Code and the General Regulations of the “Autorité des marchés financiers” (AMF), Covéa Finance publishes and reviews on an annual basis, policies describing the organisation and criteria used to ensure that the interests of its clients are protected when executing orders stemming from its management decisions.

These policies on best selection of execution intermediaries and on best execution (hereinafter the “Policies”) are available on the Covéa Finance website in the section “Our reports and policies”.

Pursuant to these Procedures, the Management Company's negotiating teams are required to carry out their transactions on financial markets via intermediaries whose names appear on an authorised list drawn up by an indexing committee.

A selection and evaluation committee meets once a year to assess the performance of the intermediaries selected based on several quantitative criteria. The latter committee meets in the presence of the negotiating teams responsible for the selection and evaluation of the intermediaries as well as managers, middle office heads, legal officers and internal auditors.

Monthly ad hoc committee meetings may also be held, particularly in case of a major change in the performance of an authorised intermediary, market conditions or a specific development at Covéa Finance.

Compliance with the list of intermediaries is subject to control by the Compliance and Internal Audit Officer.

Pursuant to the applicable provisions of the General Regulations of the Autorité des Marchés Financiers, a report on intermediary fees is available on the Covéa Finance website in the section “Our reports and policies”.

Policy on voting rights

Pursuant to the provisions of Article L533-22 of the French Monetary and Financial Code, the rights accruing from the UCITS shareholder status, and particularly voting rights, have been exercised freely in the interest of the unit holders in line with the shareholder commitment policy available on the Covéa Finance website in the section “Our reports and policies”.

Non-financial information**Information on consideration of sustainability risks (Article 8)**

Pursuant to the law on the energy transition for green growth as amended and codified in Articles L533-22-1 and D533-16-1 of the Monetary and Financial Code and Article 3 of Regulation (EU) 2019/2088 of the Parliament and of the Council of 27/11/2019 on disclosure of sustainability information in the financial services sector (“SFDR”) and Regulation (EU) 2020/852 of 18 June 2020 on the establishment of a framework to promote sustainable investment, amending Regulation (EU) 2019/2088 (the “Taxonomy” Regulation), the UCI is required to publish non-financial information.

With regard to sustainability information stemming from the European Regulation “SFDR”, this European regulation seeks to enhance and harmonise transparency among financial market players on social and environmental responsibility.

Sustainability transparency in financial products:

In order to make it easier for investors to identify the financial products that match their expectations on environmental and social issues, the Sustainability Regulation (“SFDR”) requires each entity to classify each of its products in one of the following three categories:

- Article 9: products with a sustainable investment objective,
- Article 8: products addressing environmental and/or social issues,
- Article 6: other products without the promotion of environmental and/or social characteristics as their primary objective and without sustainable investment as their management objective.

Information on the double materiality principle relating to 1) sustainability risks, and 2) negative sustainability impacts can be found in the Sustainability Risk Statement available on the Management Company’s website in the section “Our Reports and Policies”.

Since 10 March 2021, the Fund is classified under Article 8 of the SFDR (“products addressing environmental and/or social issues”).

Consideration of sustainability risks and factors, as defined in the EU Regulation 2019/2088 of the European Parliament and of the Council of 27 November 2019, is fully embodied in Covéa Finance’s Sustainability Risk and ESG policy.

Sustainability risk monitoring is mainstreamed into Covéa Finance’s investment decision and value chain.

Covéa Finance’s investment policy seeks to mitigate sustainability risk through a system based mainly on implementation of exclusion filters (normative, sectoral and/or thematic) applicable to any direct investment in shares or bonds and accessible on the website, combined with implementation of non-financial selection criteria in addition to financial selection criteria.

All information on how the management company incorporates criteria on compliance with environmental, social and governance quality (ESG) objectives in its investment process can be accessed on the Covéa Finance website in the section “Our reports and Policies”.

In light of developments and work in progress, the categorisation of UCIs in the range may vary depending on the UCI.

UCI investment share related to sustainable activities.

The objective of the European Union Taxonomy is to identify business activities considered as environmentally sustainable. The Taxonomy identifies these activities according to their contribution to six broad environmental objectives: Climate Change Mitigation, Climate Change Adaptation, Sustainable Use and Protection of Water and Marine Resources, Transition to the Circular Economy (waste, prevention and recycling), Pollution Prevention and Control, and Protection of Healthy Ecosystems.

Currently, Technical Screening Criteria have been developed for some business activities that can substantially contribute to two of these objectives: climate change mitigation and climate change adaptation. These criteria are currently awaiting publication in the Official Journal of the European Union. Thus, the data presented below only captures alignment with these two objectives, based on currently unpublished criteria, as submitted to EU co-legislators. We will update this information in case of changes to these criteria, development of new review criteria for these two objectives, as well as during implementation of criteria for the other four environmental objectives.

To be considered sustainable, a business activity must demonstrate that it makes a substantial contribution to the achievement of one of the 6 objectives, while not harming any of the other five (the so-called DNSH (Do No Significant Harm) principle). For any activity to be considered aligned with the European Taxonomy, it must also respect the human and social rights guaranteed under international law.

The specific non-financial information related to the CIU's positioning in Article 8 is specified in the periodic information annex to this report.

The principle of not causing significant harm applies only to investments underlying financial products that reflect the European Union's criteria for environmentally sustainable business activities. The investments underlying the remaining portion of this financial product do not reflect EU criteria for environmentally sustainable business activities.

2022 Report on Covéa Finance's compensation policy

As a management company, Covéa Finance places a high premium on compliance with provisions on remuneration stated in Directive 2011/61/EU by the European Parliament and the Council of 8 June 2011 on alternative investment fund managers (hereinafter referred the "AIFM Directive") and Directive 2014/91/EU of 23 July 2014 on UCITS managers (hereinafter the "UCITS V Directive"). The regulations on the management company's remuneration structures, practices and policies are mainly aimed at fostering a sound, efficient and disciplined management of the risks to which the management company and the fund are both exposed.

1. Remuneration amounts paid by the Management Company to its employees

During the 2022 financial year, the total amount of remuneration announced by Covéa Finance to all of its staff (persons at 31/12/2022) stands at EUR 15,293,424. This amount is broken down as follows:

- EUR 12,245,120 , i.e. 80% of the total amount paid by the company to its employees was fixed pay, and
- EUR 3,048,304, i.e. 20% of the total amount paid by the company to its employees was variable pay. Variable pay for the 2022 financial year was made to 164 employees. One employee received variable pay in arrears for 3 years.

Out of the total payment made by the management company for the year, EUR 8,314,762 was made to senior staff of Covéa Finance whose activities have a substantial impact on the Fund's risk profile as outlined in our 2022 Remuneration Policy.

2. Remuneration amounts paid by the Fund to the Management Company's employees

Covéa Finance does not effect any profit-sharing on capital gains (or carried interest) and the Fund does not pay any (fixed or variable) salary to managers.

3. Impact of remuneration policy and practices on the Fund's risk profile and management of conflicts of interest

In February 2017, Covéa Finance aligned its current remuneration policy with Directive 2014/91/EU of 23 July 2014, revised the rules of procedure of its Remuneration Committee and implemented remuneration practices in line with the latest legislative, regulatory and doctrinal developments introduced by the regulatory authorities. It also identified persons working under its employees who were affected by the new remuneration provisions in the AIFM Directive, the UCITS V Directive and its transpositions laws (hereinafter the "Identified Population"). These are employees who meet the following two criteria:

- (i) Belong to an employee category with a variable pay and whose activities are likely to impact the risk profile of the management company or the Fund managed;
- and
- (ii) Have a variable pay above EUR 200,000, thereby reflecting the level of responsibility for the risk profile.

Where the Identified Population's remuneration varies based on performance, the total amount, which is capped at a level below their fixed pay, is determined by the manager by combining the performance assessments of the employee concerned, their operational unit and/or the portfolio basket (UCI, AIF and "Mandate") with assessments of the overall performance of the management company. The individual performance assessment is based on both financial and non-financial criteria.

All the principles are outlined in the Covéa Finance Remuneration Policy, which is available on its website.

4. Governance and management of remuneration principle

The remuneration policy is reviewed yearly by the Remuneration Committee provided for in the Covéa Finance articles of association. It comprises:

- A representative of the Supervisory Board of Covéa Finance;
- Two representatives of Covéa Group, who are independent from Covéa Finance, at least one of whom must sit on the Covéa Group Remuneration Committee; and
- The Chairperson of Covéa Finance.

Pursuant to the regulations, most members of the Remuneration Committee neither hold any executive position within Covéa Finance nor earn any salary as employees of the latter.

Transparency of securities financing transactions and reuse of financial instruments (Securities Financing Transactions Regulation (SFTR))

During the financial year ended at 30 December 2022, the UCI did not carry out any transactions that fall under the SFT Regulations.

Main portfolio movements during the year

Société de Gestion :

COVEA FINANCE

8-12, rue Boissy d'Anglas

75008 Paris

Statutory auditors' report on the financial statements

For the year ended 30th December 2022

To the Shareholders of COVEA ACTIONS EUROPE OPPORTUNITES,

Opinion

In compliance with the engagement entrusted to us by your Management Company, we have audited the accompanying financial statements of COVEA ACTIONS EUROPE OPPORTUNITES, for the year ended 30th December 2022.

1 | COVEA FINANCE | Statutory auditors' report on the financial statements | For the year ended 30th December 2022

In our opinion, the financial statements give a true and fair view of the assets and liabilities and of the financial position of the Company⁵, as at 30th December 2022 and of the results of its operations for the year then ended in accordance with French accounting principles.

Basis for Opinion

Audit Framework

We conducted our audit in accordance with professional standards applicable in France. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Our responsibilities under those standards are further described in the "Statutory Auditors' Responsibilities for the Audit of the Financial Statements" section of our report.

Independence

We conducted our audit engagement in compliance with independence requirements of the French Commercial Code (code de commerce) and the French Code of Ethics (code de déontologie) for statutory auditors, for the period from 1st January 2022 to the date of our report.

Justification of Assessments

In accordance with the requirements of Articles L. 823-9 and R. 823-7 of the French Commercial Code (code de commerce) relating to the justification of our assessments, we inform you of the following assessments that, in our professional judgment, were of most significance in our audit of the financial statements of the current period.

These matters were addressed in the context of our audit of the financial statements as a whole, approved in the conditions mentioned above, and in forming our opinion thereon, and we do not provide a separate opinion on specific items of the financial statements.

Specific Verifications

We have also performed, in accordance with professional standards applicable in France, the specific verifications required by French law and regulations.

We have no matters to report as to the fair presentation and the consistency with the financial statements of the information with respect to the financial position and the financial statements given in the management report of the Management Company.

2 | COVEA FINANCE | Statutory auditors' report on the financial statements | For the year ended 30th December 2022

Responsibilities of Management and Those Charged with Governance for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with French accounting principles, and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Fund's ability to continue as a going concern, disclosing, as applicable, matters related to going concern and using the going concern basis of accounting unless it is expected to liquidate the Fund or to cease operations.

The financial statements were approved by the Management Company.

Statutory Auditors' Responsibilities for the Audit of the Financial Statements

Our role is to issue a report on the financial statements. Our objective is to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement. Reasonable assurance is a high level of assurance but is not a guarantee that an audit conducted in accordance with professional standards will always detect a material misstatement when it exists. Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of these financial statements.

As specified in Article L. 823-10-1 of the French Commercial Code (code de commerce), our statutory audit does not include assurance on the viability of the Fund or the quality of management of the affairs of the Fund.

As part of an audit conducted in accordance with professional standards applicable in France, the statutory auditor exercises professional judgment throughout the audit and furthermore:

- Identifies and assesses the risks of material misstatement of the financial statements, whether due to fraud or error, designs and performs audit procedures responsive to those risks, and obtains audit evidence considered to be sufficient and appropriate to provide a basis for his opinion. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtains an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the internal control.

- Evaluates the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management in the financial statements.
- Assesses the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Company's¹² ability to continue as a going concern. This assessment is based on the audit evidence obtained up to the date of his audit report. However, future events or conditions may cause the Company¹² to cease to continue as a going concern. If the statutory auditor concludes that a material uncertainty exists, there is a requirement to draw attention in the audit report to the related disclosures in the financial statements or, if such disclosures are not provided or inadequate, to modify the opinion expressed therein.
- Evaluates the overall presentation of the financial statements and assesses whether these statements represent the underlying transactions and events in a manner that achieves fair presentation.

1 accounting rules and methods

The annual financial statements are presented in the formats prescribed by the amended Regulation ANC 2014-01.

Asset valuation and accounting rules

1 - Valuation methods:

The net asset value of the unit and/or share is calculated, taking into account the following valuation methods:

General rules:

- Portfolio inflows are recorded at their acquisition price (excluding charges) and outflows at their transfer price (excluding charges).
- Cash, deposits and financial instruments held in portfolio and denominated in foreign currency are converted to the UCI's accounting currency at the exchange rate of the valuation day.

Financial instruments traded on a regulated or similar market:

- Securities of the "Shares and similar securities" category traded on a French or foreign regulated market are valued at the closing price of their main market.
- Bonds and similar securities are valued at the market price based on "contributed pricing". However: Securities for which the price is yet to be recorded at the valuation date or for which the price has been rectified, shall be valued at their probable trading value under the supervision of the Management Company. These values and the justification thereof shall be made available to the statutory auditor during the latter's audits.
- Negotiable debt securities and similar securities:
 - i. Treasury bonds and similar securities (BTF, T-bill, Letras, BOTS, etc.), as well as medium-term marketable securities and similar securities with a maturity above one year are all valued at the market price based on contributed rates.
 - ii. Short-term marketable securities and similar securities (ECP, NEU CP, etc.) with a maturity below one year are valued daily using a spread and a representative composite yield curve in the investment universe.
- UCI units and shares: Mutual Fund shares and UCI units are valued at the last known net asset value.

Financial contracts:

- Transactions on financial futures or options negotiated on organised markets: Transactions on financial futures or options traded on French or foreign organised markets are valued at the settlement price or the market value.
- Over-the-counter (OTC) transactions: Futures or options transactions, or swap transactions carried out on OTC markets and authorised by the regulations on UCIs are valued based on market conditions or at a value estimated following the procedure outlined by the Management Company.

Temporary acquisition and transfer of securities:

- Temporary acquisition of securities: Securities acquired under repurchase agreements or borrowed securities are recorded as securities purchased for the amount indicated in the contract, plus interest receivable.
- Temporary transfer of securities: Securities transferred under repurchase agreements are recorded as securities sold and valued at their current value. Debts representing securities transferred under repurchase agreements, such as those from borrowed securities, are recorded as securities sold at the value set in the contract plus accrued interest payable.

Off-balance sheet commitments:

Futures contracts are recorded at their market value as off-balance sheet commitments at the settlement price. Conditional forward transactions are translated into the equivalent

underlying.

Financial guarantees and margin calls: Financial guarantees received are valued at the market price (mark-to-market). Daily variation margins are determined from the difference between the market price valuation of guarantees provided and the market price valuation of collateralised instruments.

2 - Accounting method

Income recognition method

The accounting method retained for income recognition is the matured coupon method.

The following are deducted from income:

- Management fees,
- Financial expenses and charges on lending and borrowing of securities and other investments.

Income is composed of:

- Income from securities,
- Dividends and interest received at the currency rate, for foreign securities,
- Income from cash flow in foreign currency, securities lending, repo transactions, and other investments.

Operating and management fees

These fees include all the fees charged directly to the UCITS, excluding transaction fees. Transaction fees include intermediation expenses (brokerage, stock exchange taxes etc.) and transfer fees, if applicable, which may be levied by the depository.

The following fees may also be charged in addition to management fees:

- Outperformance fees. These compensate the management company if the UCITS exceeds its objectives. They are therefore charged to the UCITS;
- Transfer commissions charged to the UCITS;

For more information on the fees actually charged to the UCITS, kindly refer to the "Fees" section of your Key Investor Information Document (KIID).

| Fees charged to the UCITS | Base | Rate / Scale |
|--|----------------------------|--|
| Financial management fees (incl. VAT) | Net assets | I Unit: 0.60 % maximum N Unit: 1.00 % maximum A Unit: 1.60 % maximum |
| Administration fees outside the Management Company | Net assets | None |
| Maximum indirect costs, tax inclusive (management fees and expenses) | Net assets | Not concerned |
| Transfer commission | Charge transaction on each | None |
| Outperformance fee | Net assets | None |

Accounting currency

The Fund's accounts are kept in euros

Indication of accounting changes subject to special information to unitholders

Changes made: None.

Changes to occur: None.

Details of other changes which must be specifically notified to unitholders (not certified by the statutory auditor)

Changes made:

- Annual update of fees and performance;
- Compliance with the Taxonomy Regulation.

Changes to occur:

- Publication of the PRIIPS KID replacing the KIID;
- Publication of the SFDR annex;
- Benchmark index performance;
- Update to regulatory documentation to reflect the management of the fund.

Details and justification of changes in valuation and implementation procedures

None.

Details of the type of errors that have been corrected during the period

None.

Details of the rights and conditions attached to each unit categoryNet income:

A Unit / FR0000441685

UNIT currency: EUR

| | 30.12.2022 | 31.12.2021 | 31.12.2020 | 31.12.2019 | 31.12.2018 |
|--|-------------------|--------------|--------------|--------------|--------------|
| Number of outstanding units | 435,385.27 | 383,950.0629 | 267,683.1678 | 281,481.4966 | 353,665.3618 |
| Net asset value | 85.11 | 103.86 | 94.78 | 88.37 | 70.69 |
| Unit distribution net capital gains and losses (including interim payments) | - | - | - | - | - |
| Unit distribution (including interim payments)* | - | - | - | - | - |
| Unit tax credit transferred to unit holders (individuals) ⁽¹⁾ | - | - | - | - | - |
| Unit capitalisation* | 5.21 | 14.00 | -3.00 | 0.95 | 1.70 |

* The amounts of the unit distribution, the unit capitalization and the tax credits are indicated in the accounting currency of the UCITS. The unit capitalization is the sum of earnings and higher net capital losses and the number of units outstanding. This calculation method has been applied since 1 January 2013.

⁽¹⁾ In application of the Tax Instruction of 4 March 1993 of the General Tax Directorate, the unitary tax credit is determined on the day the dividend is clipped by dividing the total amount of the tax credits amongst the outstanding units on that date.
